

Corona Outbreak in the Context of Global Pandemic

Paper Submission: 03/02/2021, Date of Acceptance: 14/02/2021, Date of Publication: 25/02/2021

Abstract

In our country at present, pandemic called corona has disturbed the peace system of the entire world. As a result, different kinds of problems are coming in front of us and in future also its effect will remain for a long time as is being anticipated. In the context of this episode, I have presented a live example on this problem that has happened in society.

Keywords: Epidemic, imprisoned, deteriorated, perches, grievances.

Introduction

In our society today, covid19 has emerged as a burning problem. This corona has a very adverse effect on the economic, social condition of the society. Every person is seen saying trahimam trahimam. It has a very bad effect in the activities that are going on. Today, time has become so adverse that the common man has imprisoned himself in the houses and the animals living in the cages can be seen roaming in the open places. No effective preventive measures have yet come before us. As it is known that we can protect ourselves from this disease or epidemic only if we follow social distance. This disease has emerged from the city of Wuhan in China. Today, this epidemic is taking the lives of people. The situation of foreign countries is even more frightening. Number of people is losing their lives due to Corona without any reason. The problem is with elderly people and children below ten years. So far there is no effective solution to avoid this. How will corona affect the life of human beings in general. In this context Electronic Research Journal of Social Science and Humanities stated "Government in 61 countries have announced or implemented the closure of educational institutions in an attempt to show the spread of the disease"¹ (www.eresearchjournal.com)

The state of the Indian economy deteriorated before the Corona epidemic. All the rating agencies have reported a steady decline in India's growth forecast for growth. They had stated that inflation and unemployment rates in India are high.

In such a way, due to the Corona epidemic, the way in which a complete lockdown policy has been adopted in India and most countries of the world, not only India but every country of the world will have to pay its economic and social values.

Awareness is the only Way to Prevent Corona

The first question that arises is whether there was no other way to deal with this epidemic? To a large extent, the answer is no, as no vaccine has yet been developed to deal with this epidemic. In this context, Emily has written, "Hope is the thing with feathers that perches in the soul-And sings the tunes without the words- And never stops at all."²

Rescue, awareness and isolation are effective in dealing with this problem, which has been adopted by all the countries.

The first and most serious impact of this epidemic is on the families whose members have died due to this disease.

If he was the head of the family, then the responsibility of handling the family, the present and future of the children would all become uncertain. Since the death toll from this epidemic is in the thousands. Therefore, its widespread impact will also be seen on the society of those countries.

The second social impact of the epidemic is the 'racist effect'. As we know this disease has started from China, so Chinese citizens can be known for the next few years due to this epidemic.

Not only can they be racially commented on by people of other countries, but they may also have to suffer neglect. In India, there are already racist comments on Indians of North East like Momos, Nepali, Chinky-Pinky and Chinese. Now the name of Corona is also set to be added to this sequence, which should be seen as a social problem.

Third social impact of epidemic can be seen on workers leaving for their homes on foot after the government declared a lockdown amid the spread of the corona virus. The next social impact will be on the communities which are economically extremely backward. For example, nomadic people, daily wage laborers, workers working in the unorganized sector, etc.

People of these communities can see double impact of this epidemic. The first effect is the zeroing of current income in the event of loss of employment.

On the other hand in the absence of any savings, the family has to go through the pressures of maintenance and problems like family feud.

According to Center for Disease Control and Prevention "The outbreak of Corona Virus disease 2019 (Covid-19) may be stressful for people. Fear and anxiety about a disease can be overwhelming and cause strong emotions in adults and children. Coping with stress will make you, the people you care about, and your community stronger."³
(www.cdc.gov/coronavirus/2019)

A social impact of the epidemic can also be seen from the perspective of female discourse. In fact, it is believed that in a patriarchal society, women have full responsibility for meeting the needs of the family from morning to night.

As is known to all, children, elderly, adults are all imprisoned in their own homes in the event of lockdown, so even if they are unwilling, the housework of women has increased unnecessarily during this epidemic. In this context Maya Angelou has said, "You may not control all the events that happen to you, but you can decide not to be reduced by them."⁴

The effect of which can be seen in the form of women's health and mental pressure. Apart from the above mentioned negative social effects, some positive effects have also arisen due to this corona epidemic which has the most significant 'environmental impact'.

Since, during this period, all types of pollution have been completely stopped, due to which the river and air are all clear, people will get benefit in the coming days.

Safety related instructions have to be strictly followed due to busy daily life and work load,

people were unable to give time to their family. So this epidemic has also provided an opportunity to address the grievances of all those people.

But the price of these positive aspects is very heavy. So it is better that as soon as possible the whole world is freed from this epidemic so that public life can be as normal as before. For this, citizens of every country have to discharge their responsibilities.

Instructions related to government and security measures will have to be strictly followed. This is the only way to defeat this epidemic and also to avoid all the negative social and economic effects.

In the context of modernity, covid19 has brought many challenges in front of us. The biggest challenge is of the workers. Due to this epidemic people are leaving the city of the city. Those who left the village with dreams that we will make the future of family but their dreams are now shattered. To reach his home, he had to walk thousands of kilometers on foot. Would anyone have imagined this dreadful situation that these days will be seen. They are missing. Little children walking with them are also groaning with pain while walking. The poignant scene is in front of us. People are tired and sleeping on the roadside, only then a vehicle climbs on them and they are put to sleep forever. There are so many deaths at the same time. It is necessary to consider their safe journey. Even before the epidemic has caused diarrhea in the country, there is a difference between the earlier epidemic and this epidemic. There used to be no health-related facilities, but now when these facilities are available in our country, then we are not able to save the lives of people. It is toxic that it can be guessed that the elderly and children are not going to get rid of it yet until its vaccine is discovered. It is necessary to take care of social distance. Social distance is also not working. If their journey is continued by means of the means found in the road, then the pre-occupants infect each other and some people become so infected. Before completing the journey that their continuation the traveling journey comes at such a sudden turn that they always end up in death forever. Here too, people do not follow the social distance and in the hurry to reach home, they will always be separated from their family forever.

According to WHO, in 2002-2003, more than 8000 people suffered and 774 died of a Coronavirus, called SARS. In 2012, MERS-Cov pandemic broke out infecting more than 2994 persons and Killing over 858 lives worldwide. (World Health Organization, 2004, World Health Organization, 2013).⁵ ([www.who.int/csr/sars/country/table2004-04-21/en\(2004\)](http://www.who.int/csr/sars/country/table2004-04-21/en(2004))).

In the end, this suggestion is expected from the government and all the people to make a better effort to protect it, so that there is a lesson for the people that if it happens again in

the future, they can conquer it easily and themselves and their To keep the family safe. The most effective treatment to overcome this disease is to develop our immunity so that we can conquer the corona and not the corona over us.

Aim of Study

In the context of Corona, our aim is that when the common man is atheist and is inclined towards human resources instead of worshiping nature, then suddenly this calamity comes, which should be given the name, and it becomes divine. It suddenly shows its faith, that is, how human nature changes, it is seen here.

Conclusion

In the end, in the context of covid 19, I would like to say that no country is untouched by this pandemic, which has not affected it. Be it children or elderly, everyone has been affected in some way or the other. When we talk about children and elders, then their parents have imprisoned them in their homes,

and if we talk about the elderly, then their exit has taken them to death. In order to be victorious over a pandemic, it is necessary to take some concrete steps so that in future, it cannot manifest itself again in the society and country.
